DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-3 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

While applicant may be his or her own lexicographer, a term in a claim may not be given a meaning repugnant to the usual meaning of that term. See *In re Hill*, 161 F.2d 367, 73 USPQ 482 (CCPA 1947). The term "room" in claims 1-3 is used by the claim to mean "pot, vessel, chamber, container or tray," while the accepted meaning is "space or a room in a building."

While applicant may be his or her own lexicographer, a term in a claim may not be given a meaning repugnant to the usual meaning of that term. See *In re Hill*, 161 F.2d 367, 73 USPQ 482 (CCPA 1947). The term "net" in claim 1 is used by the claim to mean "perforated or having apertures," while the accepted meaning is "a fabric having multiple holes or a loose weave."

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Carlson (US Des.313203) in view of Craven et al. (US 5695703). Carlson clearly anticipates the structure of the device including upper and lower chambers (Fig 7) where the upper chamber has a portion having apertures extending into the lower chamber where when filled with soil would transport water into the upper portion. There is also a protrusion on the lower portion (Fig 4) that would ventilate the lower portion and allow addition or subtraction of water. Apertures in the upper portion would allow excess water to flow back into the lower vessel (Fig 3). Carlson is silent on the material used and does not specifically disclose the device being made of clay. This does not create a patentable distinction, however, because merely selecting a known material on the basis of suitability and intended use, is obvious. *In re Leshin*, 277 F.2d 197, 125 U.S.P.Q. 416 (C.C.P.A. 1960). Craven discloses pots for plants having a protrusion in a lower portion being made of clay (col 1 lines 40-42). It would have been obvious to one having ordinary skill in the art at the time the invention was made to make the device of Carlson out of clay because it is an old and well-known material for making pots.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. De Oliveira (US 4356665), Fici (US 3552058), Dryer (US 4160342), Bigglestone (US 4171593), Sukert (US 4198784), Immonen (US 4993186) and Deutschmann, Sr. (US 5168664) disclose similar devices.
